HW4

Ken Petro

July 28, 2022

Question 1

I learned how to use Linux, Latex, and Python. I revisited how to use Matlab, since I have had experience with it in other classes.

Question 2

Latex was the most valuable to me because I enjoyed learning to use it, and it will be useful on future assignments.

Question 3

I already have a decent amount of experience with Matlab, so there wasn't much new to learn that week.

Question 4

I know Matlab will be the most useful to me within mathematics, since I already have experience needing it in other classes.

Question 5

Linux will be the least likely to need to know for a mathematical career, since Matlab and Python are better suited for math.

Question 6

Latex will definitely be useful for me because I will use it for assignments and projects.

Question 7

Linux was the most fun to learn because, like you said, if you know how computers work - you're like a computer wizard.

Question 8

I think that it would be better to walk through writing the code together instead of having everyone do it individually, which would get rid of the downtime waiting for you to talk to each person.
